

How to use Bluetooth thermal printer with its android jar ?

tushamanking *over 1 year ago*

Hello everyone I want to use Bluetooth thermal printer "Bixelon SPP-r310" (This is jar sdk [link](#)).

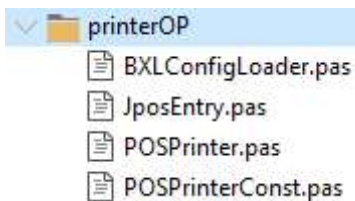

I seen the example for connect to the printer below,

[Example]

```
import com.bxl.config.editor.BXLConfigLoader;
import jpos.config.JposEntry;
import jpos.POSPrinter;
import jpos.POSPrinterConst;

try
{
    POSPrinter posPrinter = new POSPrinter(this);
    posPrinter.open("SPP-R200III");
}
catch(JposException e)
{
    e.printStackTrace();
}
```

I made Object-pascal file for link all java classes that appear on top of the example.

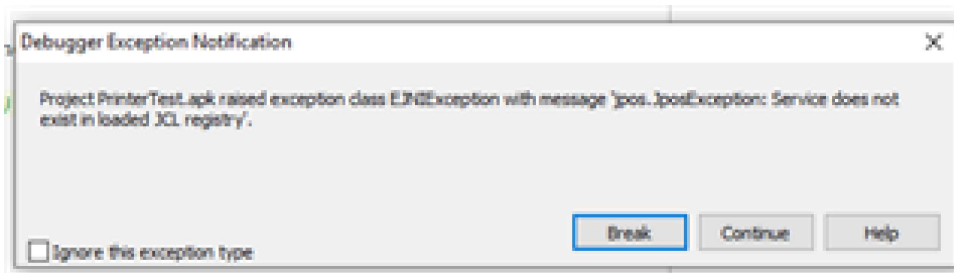

and I try to do something link this

Fullscreen

```
29
30 {$R *.fmx}
31
32 procedure TForm1.FormCreate(Sender: TObject);
33 var
34     POS : JPOSPrinter;
35 begin
36     POS := TJPOSPrinter.Create();
37
38     try
39         POS.open(StringToJString('SPP-R310'));
40         ShowMessage('OK');
41     except
42         ShowMessage('Error');
43     end;
44 end;
45
```

finally the result is

First chance exception at \$D4B52809. Exception class EJNIException with message 'jpos.JposException: Service does not exist in loaded JCL registry'. Process PrinterTest.apk

How should I do ?

hi tushamanking

see that help you: (i dont have printer bluetooth) sorry!

Connect via Bluetooth with Delphi XE7 using portable printer

<https://stackoverflow.com/questions/29946885/connect-via-bluetooth-with-delphi-xe7-using-portable-printer>

The Task is it to create a Android App with Delphi that can print a string on a POS Printer (I use the Bixolon SPP-R200II Printer).
